

Anirudha L Saralaya

+91-8088558820 | anirudhasaralaya@gmail.com | LinkedIn | GitHub | Udupi, India

Professional Summary

Entry-level Software Engineer with hands-on experience in full software development lifecycle — design, development, integration, testing, and deployment. Proficient in C, Java, JavaScript, and Linux/Unix environments with demonstrated ability to build scalable systems and apply CI/CD and agile principles. Graduating May 2026; eligible and willing to obtain DoD Secret clearance.

Technical Skills

Languages: C, Java, Python, JavaScript, TypeScript

Operating Systems: Linux/Unix (Bash scripting, CLI tooling)

DevSecOps & Containerization: Docker, CI/CD principles, Kubernetes (familiar), Vercel

Configuration Management: Git/GitHub, agile version-control workflows

Backend & Systems: Node.js, Express.js, REST APIs, Microservices, Distributed Systems

Frontend: React, Next.js, TypeScript, Tailwind CSS

Databases: MongoDB, PostgreSQL, SQL

AI / ML: TensorFlow, Scikit-learn, Keras, Pandas, NumPy

CS Fundamentals: Data Structures & Algorithms, OS, Computer Networks, DBMS, OOP, SDLC

Experience

Software Developer Intern

Jan 2026 – Present

IndiVillage Tech Solutions LLP, Udupi

- Participated in full SDLC — design, development, integration, and testing — using Next.js, React, and TypeScript in an agile, cross-functional team environment.
- Improved application efficiency by **25%** through modular, reusable component architecture, reducing code duplication and accelerating feature delivery cycles.
- Optimized rendering performance and deployment pipelines for production systems, contributing to faster load times and improved end-user reliability.

Software Developer Intern

Aug 2025 – Oct 2025

ONJI, Udupi

- Designed and built scalable REST APIs in a Linux/Unix environment, reducing API latency by **15%** through optimized routing logic and efficient request handling.
- Architected and optimized database schemas (MongoDB, PostgreSQL) — including data modeling and indexing — improving overall system performance by **25%**.
- Applied Git-based configuration management and version control throughout development, maintaining clean integration branches across the team.

Projects

Traffic Prediction System & Route Planner

- Built an ML model achieving **85% accuracy** using TensorFlow for real-time traffic prediction; applied clean architecture to separate training, inference, and serving layers.
- Engineered a resilient backend for real-time route computation on Linux, handling concurrent user requests efficiently — demonstrating distributed systems and inter-process communication thinking.

Stock Market Tracker (Android)

- Developed a backend-integrated Android application with a real-time data processing pipeline, enabling live stock tracking with low latency and high system reliability.

Education

B.Tech in Computer Engineering

Expected May 2026

Manipal Institute of Technology, Udupi (Accredited)

Certifications

- Python Programming Fundamentals – Microsoft
- Introduction to Front-End Development – Meta
- Neural Networks and Deep Learning – DeepLearning.AI
